From 23 to 25 January 2012, the partners of the European ASSETS project (Advanced Service Search and Enhancing Technological Solutions for the European Digital Library) met in Luxembourg City for the final plenary session of the project. As the Luxembourg member of the project consortium, the CVCE was delighted to welcome its 23 international partners to this event.

The aim of the ASSETS project is to help improve accessibility to the digital and multimedia content of the Europeana platform. It has developed services and new interfaces that improve the possibilities for searching and browsing millions of items from Europe’s heritage. The project was launched in March 2010 for two years of research and innovation funded by the European Commission. A conference will be held shortly to present the final results.

For the project, the CVCE has been responsible for coordinating the provision of technical services related to content and metadata (e.g. similarity-based image search and the automatic generation of summaries for long videos). It has also been involved in appraising services designed specifically for professionals in the fields of culture and research.
